# Epin Technologies

FaxFinder® Pays for Itself Quickly

Epin Technologies (ETI) is a value-added reseller that specializes in network support and IT integration for corporate clients and data centers. Leveraging on their experience with LAN/WAN technologies, ETI provides highly effective consultancy services - involving knowledge and access to best-of-class products and vendors in the technology field. They have added the MultiTech FaxFinder® fax server to their list of recommended solutions that can help any sized company increase performance and save money at the same time.

ETI had a multi-doctor clinic looking into purchasing five additional fax machines for scripts and labs. ETI instead recommended the FaxFinder fax server as an alternative to these new units as well as a replacement for their other seven fax machines.

"With the assistance of MultiTech's tech support we successfully configured their Vodavi Digital PBX to interface with the FaxFinder," explains Ed Pine, Owner of ETI. "Within ten minutes of setting up the interface we were able to configure all twelve fax extensions within the FaxFinder."

The 2-port FaxFinder model provides two lines for higher volume fax traffic as well as simultaneous inbound/outbound faxing.

"The savings from purchasing five additional fax machines and dropping seven existing POTS fax lines more than paid for this unit," said Pine. "The customer is in the process of purchasing additional DID lines so they can add another twenty users on the system."

ETI will continue to recommend the FaxFinder fax server based on the customer successes that they have had. "The MultiTech name, quality of products, and two-year warranty means we can count on it to deliver," said Pine.

Solution Benefits:
FaxFinder® Fax Server

· Replace existing fax machines with centralize fax solution

· Eliminate reoccurring costs associated with fax machines

· Send and receive faxes electronically as PDF or TIFF files

· Distributed fax solution for remote offices and field sales people

" The savings from purchasing five additional fax machines and dropping seven existing POTS fax lines more than paid for this unit. The customer is in the process of purchasing additional DID lines so they can add another twenty users on the system. "

- Ed Pine,
Owner of Epin Technologies

MultiTech FaxFinder Fax Server

The FaxFinder fax server is a network attached appliance that replaces legacy paper-based fax machines and expensive online fax services. Inbound faxes are delivered to a recipient's inbox or a network folder so they can be accessed by personal computer or mobile device. Faxes can also be queued on a network printer for customers who require printed copies. Outbound faxes are sent using client software, web browser, or existing email client.

One FaxFinder replaces dozens and dozens of fax machines and supports hundreds of users.

FaxFinder Analog Fax Servers

FaxFinder IP Fax Server

For additional information and ordering information, please see the FaxFinder data sheet.

About Epin Technologies

Epin Technologies has considerable expertise & experience in designing, implementing and maintaining (troubleshooting) with IT networking technologies for corporate clients and data centers. Most of the company's implementation experience is in the Ethernet environment - some major areas of work include implementing LANs for corporate clients & data centers, WAN connectivity (through leased lines, VSATs, VPNs) and working as a liaison with regulatory authorities (telecom - DoT, Internet - VSNL) for approvals. Epin Technologies offers full turnkey services on complete networks, workgroups, software installations, upgrades, and network & computer components.
